

## ACTIV D

### Absorbent of bad smells

#### FEATURES

Vegetal product for the deodorizing treatment of environments with stale and smelly air.

Its active ingredients capture the dissolved molecules in the air (responsible for bad odors), and bind themselves firmly forming a new chemical complex with new olfactory properties.

Although scented, it is not a cover and its effectiveness is significantly higher than the classic environmental deodorants; in particular, is very active against volatile amines, sulfur molecules and nicotine, responsible for fish smells, rotten and smoky

**ACTIV / D** is ideal for hotels, meeting rooms, offices, kitchens, dining rooms, gyms, saunas, hospices

It does not contain alcohol or irritant or harmful elements for human health.

#### HOW TO USE

Spray the product as far as pointing the jug of the dispenser upward, starting from the bottom of the room and heading toward the exit.

After a few seconds you will perceive the new fragrance released from the product while the bad odor will be completely eliminated. If the air is very stale, a second application may be required.

#### CHEMICAL-PHYSICAL DATA

Physical state	: liquid
Density <sub>(15°C)</sub>	: 1,0 Kg/lt
pH <sub>1%</sub>	: 7,5
DL <sub>50</sub> (acute oral)	: >4000 mg/Kg

**WARNING:** The product does not contain dyes or caustic / corrosive substances, however it is recommended not to spray it directly on the walls or furniture in general. To make it more effective, it is important to nebulize it as finely as possible in the air.
