

DERKEMP FOAM

Foaming detergent for industrial washing

FEATURES

Foaming detergent based on water for degreasing large surfaces. **DERKEMP FOAM** is the most suitable product for all cleaning operations both vertically and horizontally.

The **DERKEMP FOAM** is biodegradable, absolutely non-flammable and easy to use and safe for the operators as it does not cause annoyance or irritation in the normal procedure of use.

Physical state	: liquid
Color	: colorless
Miscibility with water	: total
Density _(20°C)	: 1,08 Kg/lit
pH _{sol. 1%}	: 10
Flammability	: not flammable

Degreases and thoroughly cleans metal walls of storage tanks, tiled and / or painted surfaces in food processing and storage facilities

Easily removes the residues of various fat substances as well as those of a protein and sugary due to its foam rich in surfactants.

DERKEMP FOAM must be applied with the special foaming spear to have a strong gripping effect of the foam produced; it can also be applied simply by spraying when a simple cleaning effect is required.

In any case, at the recommended dilutions, it can be applied on any type of surface.

The product is ideal for: pasta factories, confectionery industries (chocolate processing in particular), sausage factories, ravioli and cheese factories. It can also be used for external / internal washing of refrigerated trucks and food transport.

HOW TO USE

Foaming effect: prepare an aqueous solution at room temperature with a concentration between 10 and 15%. Distribute on the surfaces with a special foaming spout starting from the bottom in the case of the walls; wait for at least 10 minutes then proceed to a thorough rinsing.

Without foaming effect: prepare an aqueous solution having a concentration ranging between 3 and 5%. Distribute with the appropriate sprayer, leave to act then move to a good rinse. This solution can also be applied when hot (max 40-50 ° C).
