

## DESCAL MILK

Acid descaler for the milky stone

### FEATURES

Formulated with high acidity, specific for the dissolving of the milky stone, the beer stone and all the incrustations deriving from precipitations from heat exchange fouling.

Its use is therefore ideal in plants with pasteurisers and plate sterilizers, tanks, centrifuges and pipes in general (pipe lines).

Its high concentration in active ingredients makes it suitable for use with the C.I.P. for the preparation of the acid bath. With higher dilutions, it can be used manually for the descaling treatment of industrial equipment, walls and floors.

**DESCAL MILK** is ideal for the sectors: dairy, beverages (beer, fruit juices and soft drinks), fresh pastries (ice cream) and canning.

**DESCAL MILK/F** is the version without phosphoric acid, recommended for those who must contain the phosphate emissions in the waste water destined for biodepuration.

### CHEMICAL/PHYSICAL DATA

Physical state	: liquid
Colore	: straw yellow
pH <sub>(sol. 1%)</sub>	: 1,0
Solub. in water	: total

### HOW TO USE

**C.I.P. plants:** prepare a 30% aqueous solution or calibrate the automatic diluter for this concentration value. Follow the application as scheduled.

**Manual use:** prepare a 5-10% solution, apply or circulate for 10-15 minutes, then proceed to a good rinse.

**WARNINGS:** use caution on copper and their alloys. Read carefully the safety data sheet for the use of the PPE recommended.
