DERKEMP VAP

Detergent for pressure washing machines

FEATURES

Industrial detergent soluble in water, specific for high pressure washing machines.

DERKEMP VAP is a highly concentrated tough detergent that contains emulsifiers and surface-active agents able to remove many different types of dirt. Since it is concentrated, it is more effective compared to traditional detergents and can be significantly diluted to obtain a safe, non-flammable and low-cost washing solution.

DERKEMP VAP is able to emulsify and remove dirt, oil, waxes, gas oil, mould, greases and scales of any kind.

DERKEMP VAP can be used in the mechanical and food industry, repairing and maintenance workshops and it can be used on any type of material, at the suggested doses. The product, featuring the same characteristics, is available in two versions: POWDER and LIQUID.

DERKEMP VAP IN POWDER

Physical state: homogeneous powder

Colour: white

pH: 11.5 in 1% solution

flammability: non flammable

DERKEMP VAP IN LIQUID VERSION

Physical state: liquid

Colour: light blue

pH: 10 in 1% solution

flammability: non flammable

METHODS OF USE

DERKEMP VAP is mainly intended for pressure washing machines. The recommended concentration of use ranges from 2 to 7%, according to the application. The product is sucked directly from the drum, or from a previously prepared solution for the POWDER version, using the specific equipment available on each machine. A fairly concentrated solution is sprayed at low pressure on the surface to clean and is left on for a few minutes. Then it is rinsed at high pressure to remove emulsified dirt.
