DERKEMP TOOL

Industrial detergent

FEATURES

Alkaline liquid degreaser with high penetrating power, suitable to remove industrial dirt consisting of residues of cooling lubricants, lubricating oils and tarry sludge. Thanks to the special surface-active agents contained in it, the formation of foam is reduced, therefore the product is easier to rinse.

- It is suitable to remove plants' resin residues that fall on plastic surfaces like: tables, chairs, campers, car bodies, and lorry tarps.
- On cement surfaces of industrial sheds for a whitening effect.
- It is ideal for metal and mechanical industries, joineries and foundries to clean and degrease floors and bodies of machinery (lathes, drills, work stations, etc.)
- It is recommended for garages, mechanics, and the nautical sector (boat laying up)
- In the woodwork sector, it allows to quickly clean the blades used to cut wood.
- It can also be used to clean plastic laminates
- The product can be used in the food industry to remove incrustations of cooked (sauces) or roasted products (coffee).

METHODS OF USE

Prepare a water solution with a product concentration ranging from 5 to 10% to clean any type of surface. Apply by spray or immersion; leave on for a few minutes and then rinse thoroughly. Metal pieces can also be degreased in hot processes (max 40°C). To clean floors, prepare a 3-5% solution; pour, leave on and brush, then rinse and wait until the surface is dry.

Pay attention when using the product on aluminium parts.
