

## FLOOR WAX

### Floor wax

#### FEATURES

**FLOOR WAX** is a concentrated product with waxing action to be diluted with water. The **FLOOR WAX** is easy to use and convenient to use:

Thanks to its self-leveling features, it can be spread quickly.

It is completely non-slip, as it is not a silicone-based product.

Resists subsequent washing with water and washing-up detergents, provided they don't have a de-waxing action.

#### HOW TO USE

Spread the **FLOOR WAX** evenly on the floor with a damp cloth after having diluted it in 2-3 parts of water. On a dry floor, polish with a polisher or with a wool or felt cloth. **FLOOR WAX** can also be used on floors already treated with other waxes.

**FLOOR DW** can be used on any type of floor and prepares the surface to receive the new treatment. The product is also able to penetrate the escape routes and cracks by removing the unsightly dark traces that are usually formed there.

#### HOW TO USE

**FLOOR DW** can't be diluted with water and should be used pure with rags or sponges. It is advisable to accelerate the action by passing on the surface with a brush, either manually or with a mechanical brushing machine.

## FLOOR DW

### Floor wax remover

#### FEATURES

Mixture of detergents and solvents to be used to completely remove any trace of wax from the floors. **FLOOR DW** is a particularly energetic product and it is recommended to use it in the case of floors with very old wax deposits, even in several layers, which must be completely removed.
