

FORMAT BRILL

Anti-static brightening washer cleaner

FEATURES

FORMAT BRILL is a silicone-based protective liquid with a shining effect to be used to polish and protect any glass surface, in satin-finished steel, in brass, formica, various laminates, plexi-glass and mirrors.

The product is completely biodegradable, evaporates quickly and leaves a pleasant lavender scent. It completely dissolves: greases, fingerprints, residues of smog and leaves a silicone film on the surface that protects it making it water repellent and anti-static.

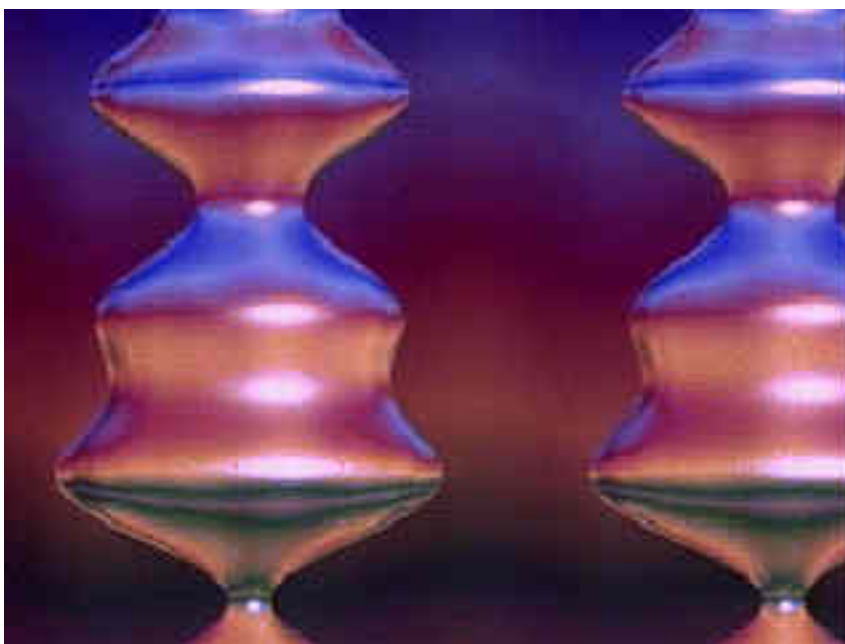

This protection helps keep the glass or shiny surfaces clean longer and allows periodic cleaning by passing only a dry cloth without having to intervene with the detergent each time.

Physical state : liquid
 Color : pink
 Odor : lavender
 pH : 7

The product is ideal for: hotels, shops, fairs, car saloons, coachbuilders, furniture and art exhibitions, museums, churches.

HOW TO USE

Dilute a part of the product with 10 parts of water; shake and spray finely

on the surfaces to be treated. Wipe with a dry and clean cotton cloth.

Next, with a second cloth, polish the surface, always operating in circular way; in this way the surface will be bright and without fingerprints.

Follow the same procedure for the bodywork of the cars but avoiding to distribute it on the windshield.
