

## KEMPHOS AD ACID

Acid additive for phospho-degrease solutions

### FEATURES

**KEMPHOS AD Acid** is a complete additive for phosphodegreasing solutions. With only one additive the following effects are obtained:

- Acidify the pH by helping to bring it to optimum values. It functions as a free acidity reserve if the state of the solution so requires.
- Restores and enhances the degreasing power of the solutions in use when the activity of the surfactants is impaired or when the contamination presents a consistency and difficulty in removal unusual and different from the usual standards.
- It increases the wetting power of the solutions by favoring the degreasing and phosphatizing action.

Adding **KEMPHOS AD Acid** has no negative effect on the solutions, but enhances and strengthens the degreasing and phosphatizing action.

The constant and correct use of **KEMPHOS AD ACID** can, in many cases, extend the durability of the solutions by allowing them to use them more rationally and consequently bring to rational management costs.

### CHEMICAL/PHYSICAL DATA

Aspect	: limpid liquid.
Color	: colorless
Spec. weight. (20°C)	: 1,17 ± 0,05
pH (sol.1%)	: 2 ± 0,5

### HOW TO USE

Add **KEMPHOS AD Acid** to 5-7% on the amount of phosphorous degrease used.
