

LIGHT

Polish for dashboards

FEATURES

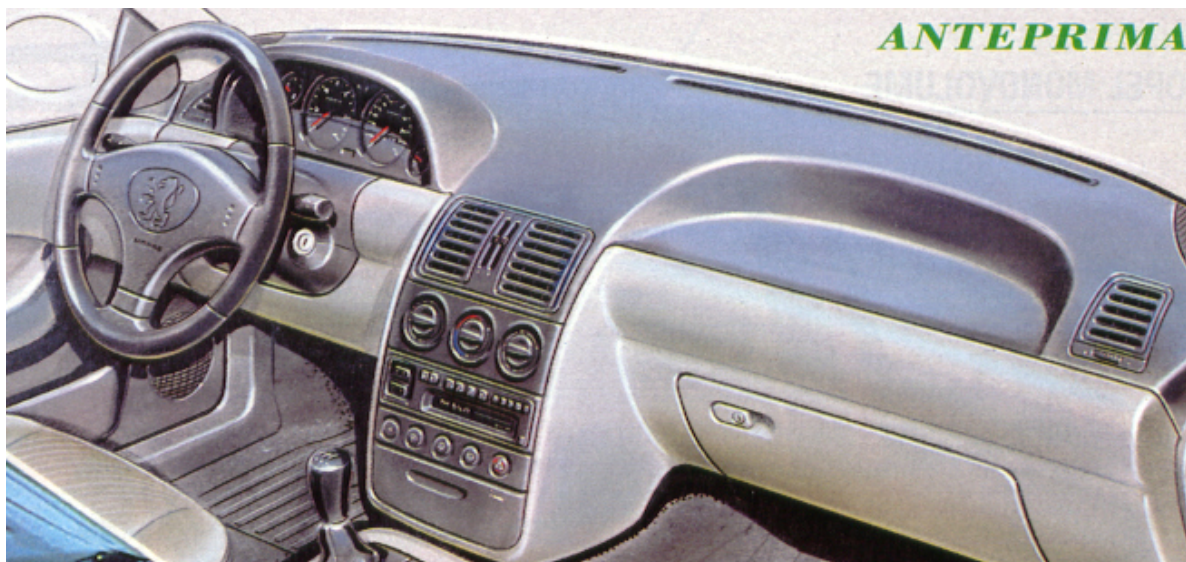

LIGHT is a specific product for cleaning and polishing car dashboards, interior linings, upholstery and all plastic or leather components.

The product **DOESN'T CONTAIN SILICONES** and can therefore be used with confidence even in body shops and car painting systems.

HOW TO USE

The product in the loose version is very concentrated and it is recommended to use it after having diluted it with 5-10 parts of water.

It is advisable to use a sprayer by adjusting the nozzle so that the product is atomized as much as possible.

LIGHT doesn't contain resins or creams, so it leaves the surfaces clean and shiny without showing greasiness. It is also absolutely harmless on the transparent plastic parts of the instrumentation and on any type of metal. An important application of the product is that relating to the surface treatment of suitcases, bags, trunks, armchairs and all the equipment made of synthetic material that have lost their brightness.

With the spray bottle version, a small quantity of product is sprinkled from a distance of 20-30 cm, trying to distribute it as evenly as possible. After application, polish with a soft cloth.
