

METALDEC Acc

Polish for stainless steel

APPLICATIONS

METALDEC Acc is a specific chemical for polishing stainless steel and many other metals.

The product is not a detergent or a descaler, but a polish, that is a cream in which, with a light stripping and descaling action, the polishing action of a very fine abrasive, consisting of natural silicates and bentonites, is associated.

METALDEC Acc therefore acts with a double action:

- ✓ during the time in which it remains in contact with the surface, emulsifies the dirt, the patinas and the oxidations that opacify it;
- ✓ as a result of the physical action that is carried out during the application, it eliminates any roughness and glosses the surface.

METALDEC Acc can be used for pickling and polishing numerous materials:

- Stainless steel
- Cromature
- Copper
- Brass
- Bronze
- Silver
- Silver plate
- Pewter

Physical state : viscous cream

Color : pink

Odor : light ammonia

HOW TO USE

To achieve good results you need to consider the two actions of product: chemical etching and polishing.

It will therefore be necessary:

- 1) Spread the product carefully on the surface to be cleaned with a cloth or sponge and rub thoroughly to allow the abrasive to perform its function. On large surfaces this operation can be carried out more comfortably with the appropriate mechanical equipment.
- 2) Allow the paste to dry completely to allow the chemical action of the descaler. However, this is a very fast phase, which takes only a few minutes.
- 3) Remove the completely dried product using a soft, clean cloth.
