

STREAM

High persistent environmental fragrance

FEATURES

STREAM products are special formulas, available in different fragrances, suitable for environmental deodorizing. Their high persistence makes them suitable as covers in all those environments where malodorous activities take place or which are characterized by a slow change of air. They contain no alcohol or aggressive substances and are easy to apply.

- ✓ Their high persistence allows a long duration of the fragrance.
- ✓ Don't require dilution steps because they are ready to use.
- ✓ They can be applied anywhere: both in industrial activities and in institutions and communities, in offices and in your own home.

They are ideal for: hotels, restaurants, offices, meeting rooms, toilets, saunas, gyms, hospices, clinics, funeral parlors and mobile homes (campers, buses, trucks, train carriages, etc.). They are particularly recommended for the perfuming of rubbish bins for urban waste, after the normal sanitization treatment

CHEMICAL/PHYSICAL DATA

Physical state	: liquid
Color	: yellow/light blue
Density _(20°C)	: 0,998 Kg/lt
Solub. in water	: total
Flammability	: not flammable
pH _(sol. 1%)	: 7

STREAM CLASSIC: tuberose

STREAM FRUIT: peach

STREAM MUSK: musk

HOW TO USE

Apply the appropriate dispenser on the bottle, adjust the nozzle trying to form a spray as finely as possible. Point the dispensed jet upwards, heading from the bottom of a room to its exit. The finely sprayed **STREAM** doesn't damage surfaces and various materials. Always carry out a test before use.
