FORMAT WC

Sanitizing, descaling detergent for chemical toilets

FEATURES

FORMAT WC is a product performing a chemical-physical action on wastewater. The product allows descaling and sanitizing wastewater without using formaldehyde which is commonly added to chemical compounds. FORMAT WC is therefore easy and safe to handle for operators. The use of the product allows attaining a series of results that are of top priority in certain situations and applications:

- High effectiveness and quick action
- Its action is not slowed down by the "lag" phase, typical of products containing bacteria and worsened in case of low temperatures.
- It is effective for years, differently from bacterial-enzymatic products.

Additional applications (where allowed by applicable laws) are: campers, trailers, boats, buses, etc...

FORMAT WC was studied to boost the sanitizing, deodorizing, and descaling power on wastewater as soon as it is applied, therefore it renders subsequent emptying operations of flush tanks easy and safe by preventing any clogging.

SAFETY

FORMAT WC as is, carries only the hazard symbol Xn (HARMFUL). However, since the product can be significantly diluted thanks to its superior action, the solution of use does not carry any hazard symbols.

FORMAT WC must not be used in septic tanks.

STORAGE

The product is stored in the original containers for a period of at least 24 months. Protect from frost.

PHYSICAL- CHEMICAL DATA

Physical state: liquid of low viscosity

Colour: deep blue

Scent: strawberry

Density (gr/cm³): 1.03 +/- 0.05

pH (1% sol.): 6-8

flammability: non-flammable

METHODS OF USE

FORMAT WC must be dosed at a percentage between 0.5 and 1% in clean water contained inside the flush tank of chemical toilets (50 ÷ 100 ml for each 10 litres of water). Read the safety sheet for proper use.

SPECIFICATIONS

SAE AMS 1476B

DEODORANT, AIRCRAFT TOILET
